## How to measure guide

Before we design your new IKEA kitchen, we will ask you to first provide some measurements of the kitchen space. It is not hard and it will take no more than 15 minutes.

We love photos too, so feel free to take some pictures of your kitchen as it is today and email to us at [office@ikeakitchenva.com](mailto:office@ikeakitchenva.com) Try to snap the pictures from afar and not too close.

Regarding the measurements. Take a piece of paper and draw a rough outline of the kitchen walls. This will become your kitchen plan. Then roughly position windows, doors, openings, entrances, etc.

Here is an example of what the sketch may look like.

We design and build IKEA kitchens!

[office@ikeakitchenva.com](mailto:office@ikeakitchenva.com)

757-926-9910

Then mark where the current sink is located. Or even better: where the water cut off valves are located and the drain. Same with the outlets for the major appliances: locate the range oven outlet and outlet and water line for your refrigerator. Some other appliances and features that you may or may not have and need to be noted: gas lines, built-in oven, double oven, cook top, range hood, OTR microwave, wine cooler, ice maker, etc.

[office@ikeakitchenva.com](mailto:office@ikeakitchenva.com)

757-926-9910

And now it is time to take a tape measurer and start measuring certain distances. We recommend that you take a measurement and then immediately record it (write it down with a pen on the kitchen plan), then take the next measurement, write it down and so on. Start with the overall length, width and height of the room. In this example, the room is 21 feet and 3 inches long (21'3"), 14 feet and 1 inch wide (14'1") and the ceiling is 96 inches from the floor.

[office@ikeakitchenva.com](mailto:office@ikeakitchenva.com)

757-926-9910

Next measure and record all distances for one of the wall. We recommend that you measure from the corner between the walls to the object. Then measure the object itself and record the information. A good example are doors and windows. Measure distance from the corner to the door trim (but exclude the trim i.e. the distance up to the trim)... in this case 13 feet and then measure the door / opening (from trim to trim – the width of the door or window should include the trim) and record it – 60 inches.

We design and build IKEA kitchens!

[office@ikeakitchenva.com](mailto:office@ikeakitchenva.com)

757-926-9910

Then the next wall... the one with sink. Find a way to indicate where the plumbing pipes are... for example under the center line of the window above. Or 70 inches from the corner.

[office@ikeakitchenva.com](mailto:office@ikeakitchenva.com)

757-926-9910

And one more... this one is a bit tricky as on that side of the kitchen there are soffits above the wall cabinets AKA bulkhead. If you plan to hire a General Contractor and have those removed, then do not measure them. But if the soffits will remain, we will need to know the height, depth and how long each of them runs. In the end, a basic kitchen plan with measurements looks like this.

Scan it and email it to us at [office@ikeakitchenva.com](mailto:office@ikeakitchenva.com) Within 1-2 days we will contact you to discuss it and to talk about your new kitchen layout.

If you are still not sure how to take the measurements of your kitchen and how to record the information, then the next couple of pages may help.

Here is the same example kitchen that we used above and here is what you need to ideally measure:

1. The width of the interior door (opening). Notice that the measurement should include the width of the trim too.
2. The run (or length) of the wall from the corner up to the trim of the door. (13')
3. The distance between the corner and the center of the range oven outlet. (6' 6")
4. The distance between the floors and the ceiling. (96")
5. The width of the room (14')
6. The distance between the corner and the plumbing pipe or cut off valve that is to the right of the sink. (93")
7. The distance between the other corner and the plumbing that is to the left of the sink. (70")
8. The distance between the corner and the window trim (without the trim). (4' 3")
9. The distance between the other corner and the window trim. (6' 6")
10. The height of the window (from trim to trim, including the trim). (40")
11. The width of the window (from trim to trim, including the trim). (40")

[office@ikeakitchenva.com](mailto:office@ikeakitchenva.com)

757-926-9910

12. The run (or length) of the soffits on the ceiling. (9' 11")
13. The height of the soffits. (11")
14. The depth of the soffits. (14")
15. The distance between the corner and the trim of the patio door. (9' 11")
16. The width of the patio door. (80")

For all measurements that you take, we ask that you are precise up the quarters of the inch. If the distance is 24 inches and one half, please record it as 24" ½ and not 24 or 25. If it is 15 inches and three quarters, please write it down as 15" ¾ and not 15 or 16. The kitchen design (plan) that we will provide will be as accurate as your measurement. We cannot be responsible later, if you cannot fit the cabinets, cover panels or appliances because of inaccurate measurements.

The following images, give a different perspective of the same measurements.

Still not sure how to take the measurements? Feel free to give us a call and we will assist you over the phone. As a minimum, we will expect that beforehand you will email us pictures of kitchen so that we may guide you of the measurements that we need. Do not worry if have not taken all the measurements that we may need. We will give you a call or email you and ask for any additional information that we may need.

You are in good hands!

Our kitchen designers have years of experience designing thousands of projects. All our designers work closely with IKEA installers who verify the work and provide feedback.
